## Meeting place for people and jobs

At Job Market Finland, you can find information content and services related to employment.

[Show jobs](#)

# Job Market Finland is a labour and expertise service

- **Fast and high-quality matching of jobs and jobseekers.**
- Information on training services and skills development for both employees and employers.
- Information on the labour market, occupations and future working life.
- Uses ESCO classifications of skills and occupations
- Front page to PES e-services

# Meeting place for jobs, people and services

## JOB SEEKERS

Find jobs that match their competence and skills more easily and faster. They are better able to keep their skills and competencies up to date.

## EMPLOYERS

(private / public sector/third sector)

Find the employees they are looking for more easily and faster. Receive support in growing their business.

## SERVICE PROVIDERS

(private / public / third sector)

Can offer their services for a wide range of users. Gain information with which they can develop their services and find new business opportunities.

## SERVICE ORGANISERS

(government)

Are able to monitor the fulfilment of objectives and the performance of service providers. Receive statistical data that helps with planning and organisational responsibilities.

Publicly funded service

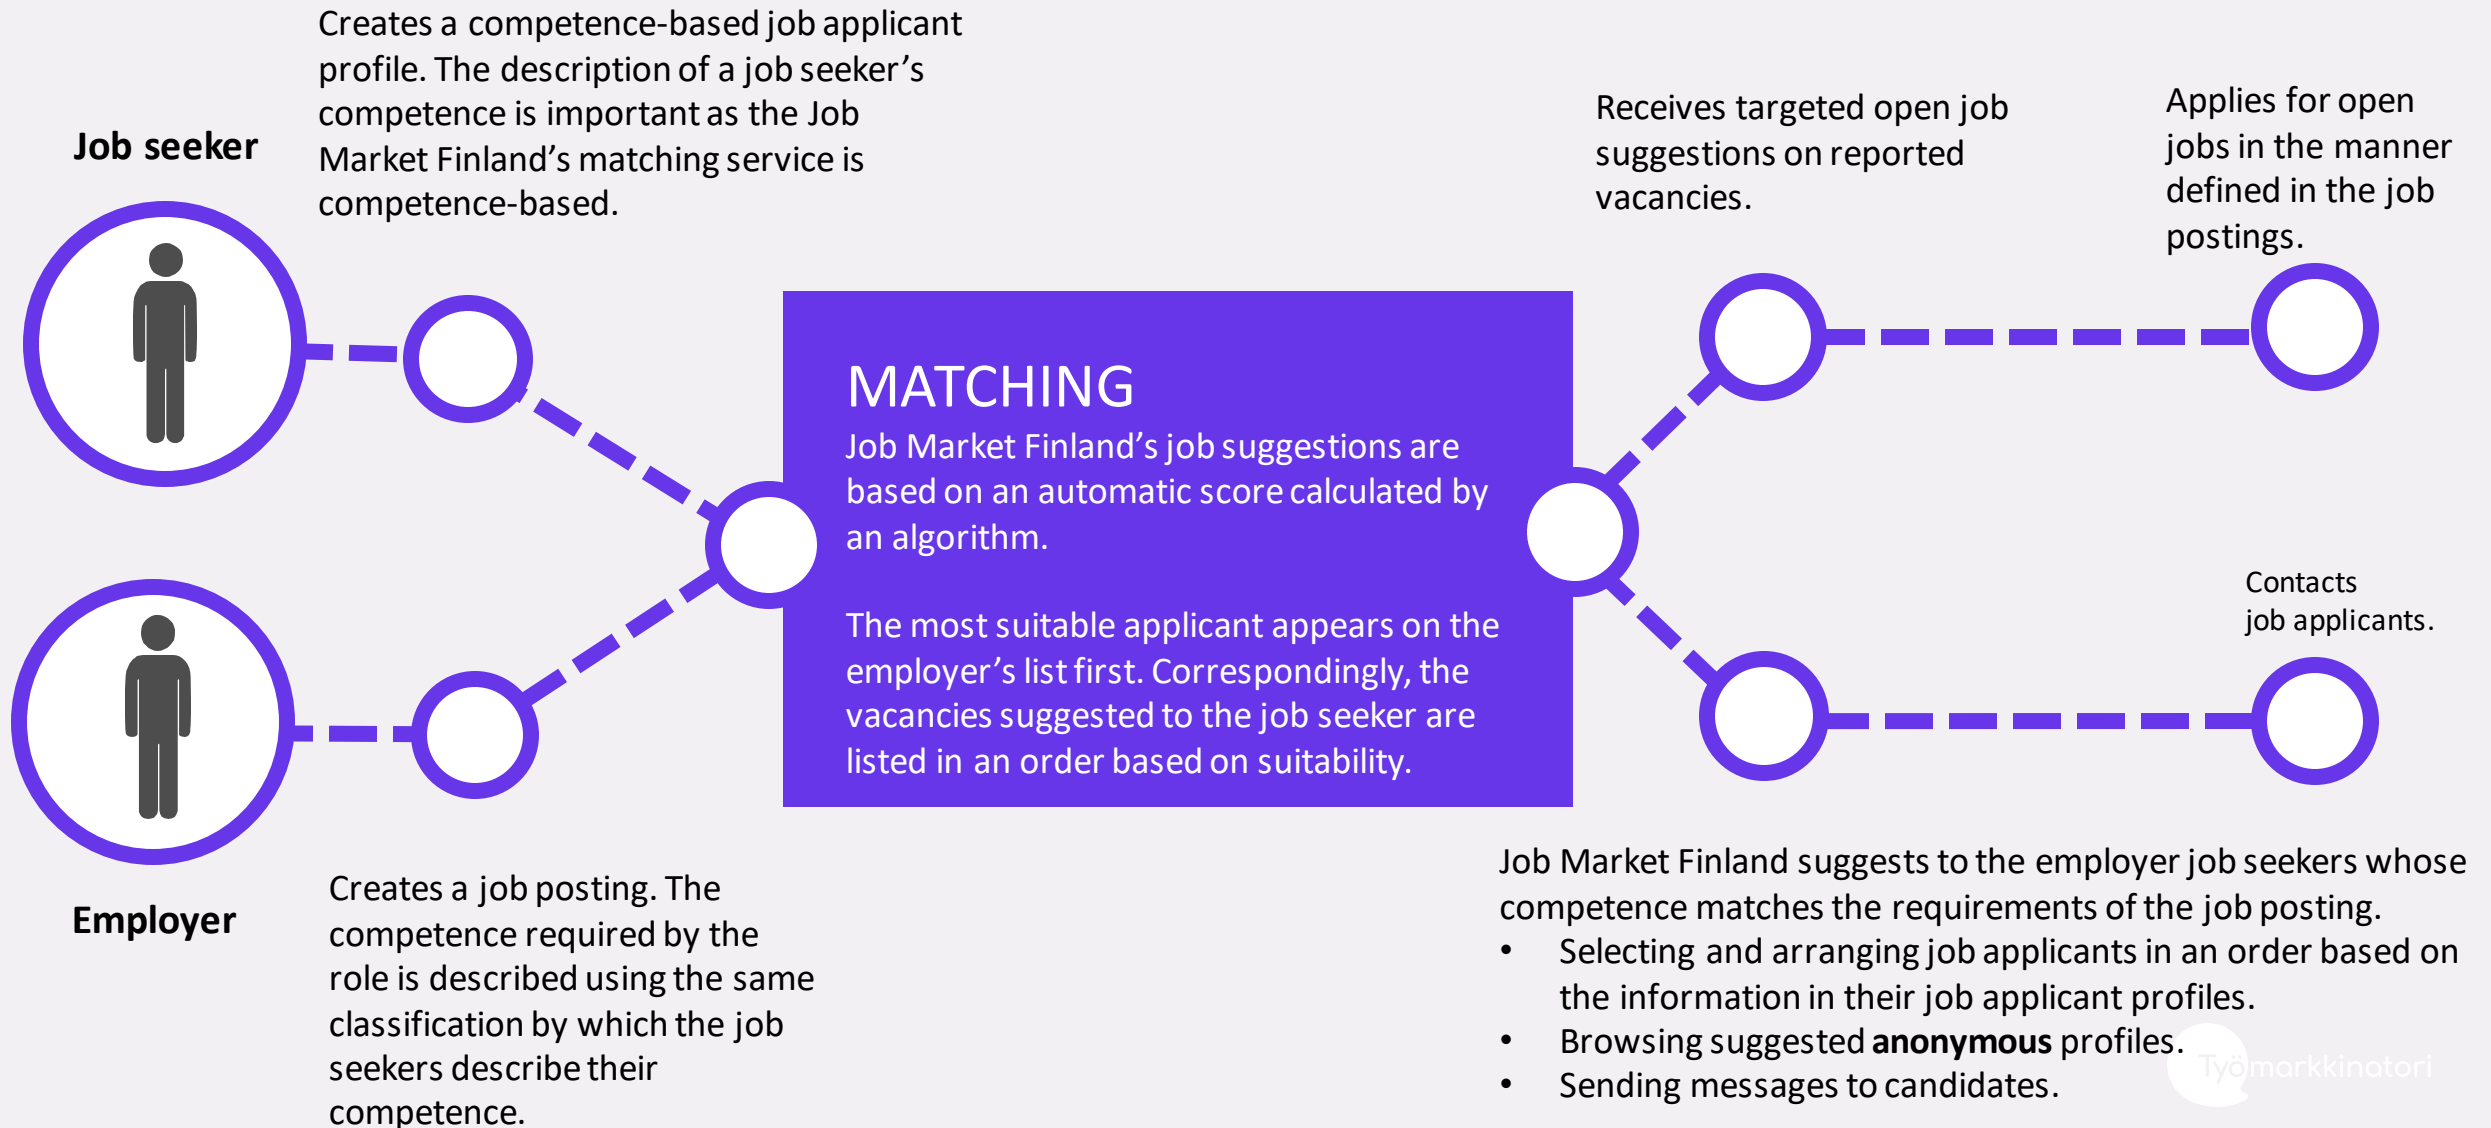

Free of charge

# Fast and high-quality matching of jobs and jobseekers – AI solutions

- Job Market Finland 's AI-services are NLP-services
- Job Market Finland's matching algorithm uses a combination of structured information, such as skills and occupations, and natural language used in the profile and job postings
- Relevant skills and occupations are recommended to the users based on the natural language processing
  - Uses ESCO classifications.
  - Makes skill recognition easier
  - Implemented on job applicant profile and on job announcement

# Overview: How Job Market Finland's matching works

# Creating a job applicant profile

- Available in Finnish, Swedish and English
- Knowledge and skills
- Introduction
- Work experience and education
- You can create profile yourself at <https://tyomarkkinatori.fi/en> and see job opportunities in Finland

## Job applicant profile

Not published to employers

Your job applicant profile consists of three sections: knowledge and skills, introduction and work experience & education. You get the most suitable job recommendations by filling all the sections. The information you add is saved automatically.

Publish to employers

You can publish your job applicant profile anytime, even when not fully finished, so the employers can find you.

# Utilising the AI in competence recognition

- Relevant skills and occupations are recommended to the users based on the natural language processing (NLP)
  - Makes skill recognition easier
  - Based on ESCO classification's names and descriptions
  - TF-IDF text search is made for few letter word parts i.e ngrams
- Helps applicant to understand one's competence
- Same competence recommender is available to employer when creating an open job posting.

## Skills

Please describe the skills related to the job you are looking for

As an IT project manager, I possess a diverse skill set to effectively lead and manage Information Technology projects. My skills collectively enable me to plan and execute projects successfully, communicate with stakeholders, lead and motivate teams, manage budgets, and ensure the quality and security of project deliverables.

## Keywords

You will get keyword suggestions based on your text. Please choose the most suitable ones. Keywords are used for job recommendations.

Agile project management

Lean project management

build business relationships

create project specifications

identify legal requirements

manage budgets

manage project changes

manage project information

organise project meetings

provide cost benefit analysis reports

ICT project manager

operations manager

programme manager

project support officer

Modify keywords

# Creating skill & occupation recommender

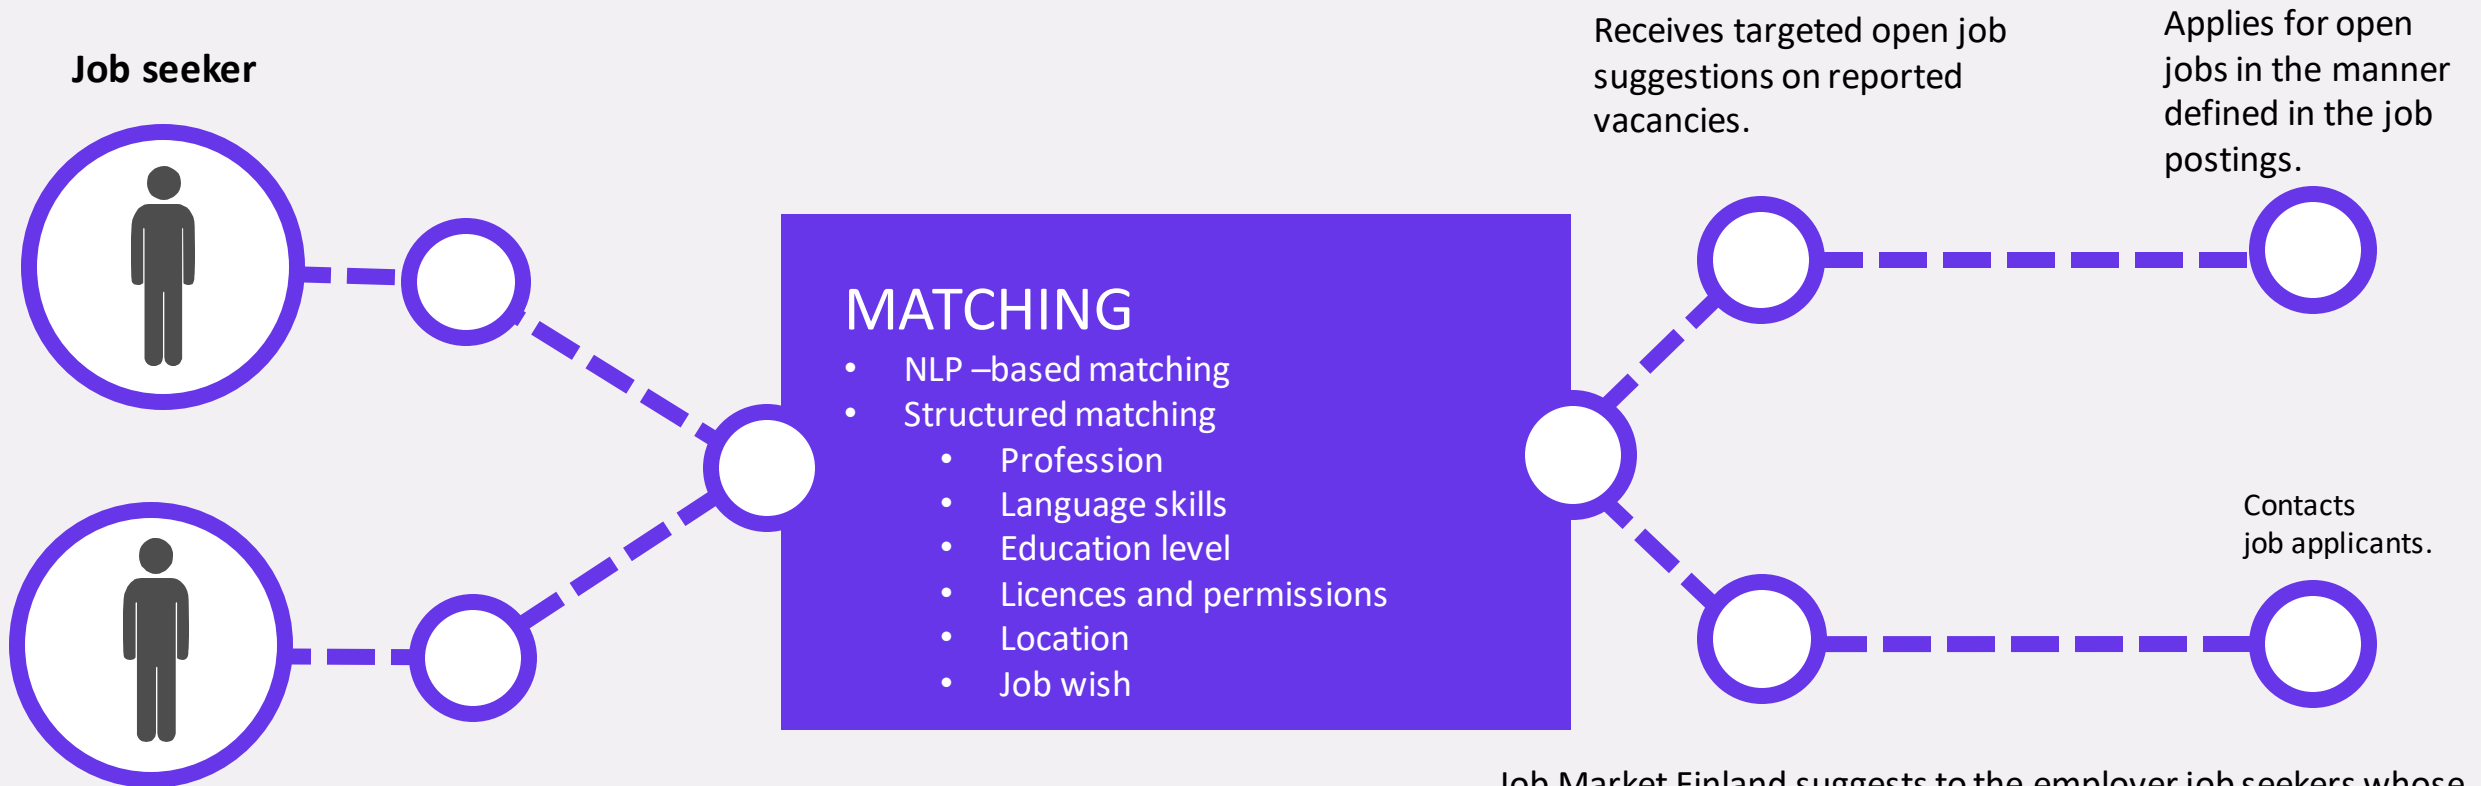

1. Preparing the data set
  1. ESCO competence 's names and descriptions were divided into few letter ngrams
  2. Same steps were performed to ESCO professions (3 000 professions) and 600 professions already in Job Market Finland
2. TF-IDF search (term frequency – inverse document frequency) suggests ESCO skills and occupations based on written text
  - Available in Finnish, Swedish and English
3. User selects the ESCO skills and occupations
4. We can match profiles and job postings based on selected ESCO skills and occupations = **occupation search**
  - Relies on selected skills and occupations
  - Isn 't language specific

# Using NLP-services for matching jobs and jobseekers

- Jobseeker can also enter free text on skills and work preferences, and we wanted to improve the matching based on written free text. We use few different NLP- services and tools.
  - Relevance model and combining TF-IDF search, FastText –search with previously introduced Occupation search
- **Relevance model:**
  - Job postings often include words and phrases that don ´t describe the job in question.
  - Requires pre-processing the job postings with relevance model before applying NLP-searches
    - Model only extracts the words that really describe the job and the suitable applicant
- **TF-IDF search**
  - Searches few letter ngrams and how often most relevant ngrams appear in each job posting or profile.
- **FastText search**
  - Creates clusters of words related to same subject by converting words in job postings and job profiles to numeric vectors
- **Combining the results from TF-IDF search, FastText search and Occupation search to get the best NLP-matching results for jobseekers and employers.**

# Overview: How Job Market Finland's matching works

Job Market Finland suggests to the employer job seekers whose competence matches the requirements of the job posting.

- Selecting and arranging job applicants in an order based on the information in their job applicant profiles.
- Browsing suggested **anonymous** profiles.
- Sending messages to candidates.

# At Job Market Finland...

500 000

people in a month  
on average  
**visit the site.**

25,000

**open jobs** posted  
on average.

287 000

users have created  
a **job applicant**  
**profile.**

26,000

of these profiles  
have been  
**published** to be  
seen by logged in  
employer users.
